

AS 9100 Employee Orientation Training

What is AS9100?

AS9100 is a quality management system for companies that design, develop, or provide products for the aviation, space, and defense industries.

AG Composites, LLC dba AG Advanced Technologies (“AG”)

- designs, develops, manufactures, and finishes composite components
- assembles composite structures
- machines metal and composite components

These processes all fall under AG’s Quality Management System (QMS).

Quality Policy

AG Composites will continuously improve while producing quality products in a timely manner to meet customer requirements.

This is posted on bulletin boards and on the information slide show.

Quality Objectives

Quality objectives are the company's goals. They are also called Key Performance Indicators (KPIs) and create a way to evaluate the company's performance.

Objective 1: Return Rate goal of 3% or less for OEM and retail products based on manufacturer defect or error - measured monthly

Objective 2: Production Scrap (nonconforming items) rate goal of 1% or less - measured monthly

Objective 3: Retail shipping rate goal of 90% on-time - measured monthly

Objective 4: Continuous improvement through training, leader development, audits, reviews, and corrective actions

Quality Objectives and Your Position

How do the quality objectives relate to your current job?

1. Customer Satisfaction:
2. Scrap/Nonconformities:
3. Shipping Deadlines:
4. Employee Performance:
5. Continuous Improvement:

Documents

There will be certain documents and forms that are required for your position.

Where can you find the documents you need for the job?

examples: Work Orders/Travelers
 Daily/Weekly Production Forms
 Maintenance Checklists

Where can you find the documents you need for HR?

examples: Vacation Request
 Payroll Forms

Quality and Your Job

Quality is everybody's responsibility.

How do you contribute?

Follow the processes you were trained to do.

- If you identify a process that is being changed or done incorrectly, notify a manager immediately.

Only use materials that are approved for the process you are doing.

- If you identify materials that are expired, or additional or different materials being used, notify a manager immediately.

If you have an idea to improve quality, efficiency, or customer satisfaction, please share that idea with management or the quality team.

Negative Actions and Negative Effects

1. Taking shortcuts - creating a nonconforming product
2. Working in a dirty, contaminated space - introducing foreign objects or debris
3. Speaking rudely to a customer - upsetting a customer, affecting sales
4. Using other employees tools - reducing efficiency
5. Not conducting maintenance on your tools - tools damage products, loss of money to the company
6. Forging documents - making materials untraceable, altering actual performance numbers
7. Using expired materials - creating a nonconforming product or unsafe product
8. Incorrect storage of chemicals - creating an unsafe work environment, potential damage to the product

Can you give two more examples?

Quality is Also “Safe & Clean”

1. Does your work create an unsafe environment or product?
 - a. Slippery floors
 - b. Hot surfaces
 - c. Sharp edges
2. What can you do to keep the product safe for other employees and customers?
 - a.
 - b.
3. Does your work create a dirty environment?
 - a. Trash
 - b. Dust
 - c. Debris
4. What can you do to keep the product safe from FOD? (Foreign Object Debris)
 - a.
 - b.

Final Checklist

1. What is the AS9100 Quality Management System and why does AG Composites have the certification?
2. What is the quality policy and where is it located?
3. What are the quality objectives (key process indicators - KPIs)?
 - a. Where are they located?
 - b. How do they relate to your job?
4. Where are the documents or forms needed for your job?
5. How do you contribute to the QMS?
6. What problems can happen if you don't follow the QMS?
7. What is your role in making a safe product?
8. What is FOD and how can it affect the customer's product?
