

Disassembly Training Form

Process: FO Doc 2 Section 3.4.3

Production Line (check applicable production line numbers)

- ☐ PL 1
- ☐ PL 2
- ☐ PL 3

Employee Name: _____

Trainer Name: _____

Initial Training Date: _____

Objective: This process is for extracting the composite parts from the molds after they have cured. The leader for this process is the Plugging Lead/Project Manager.

Employee / Trainer / Date

Parts and Tools:

--	--	--

- Impact wrench with ½" socket
- Metal 2 ½" hand scraper
- Paintbrush
- Zyvex mold release
- Plastic wedge
- Rubber mallet
- Adjustable wrench

PPE requirements: safety glasses, ear protection, heat gloves, steel toe boots

Critical Points:

1. The pillar screws in the sub must be removed and mold release must be generously applied to the mold after it is cleaned
2. Use extreme caution because the break out happens immediately after mold is removed from the oven for composite parts.

Preparation:

- ☐ Place all required tools, Documents, and Release into the work station.

Work Instructions:

- ☐ Removes attachments from mold. (subs, end caps, and c-clamps)
- ☐ Removes nuts and steel rods from the body of mold.
- ☐ Separate mold halves and remove the composite part.
- ☐ Cleans out mold
- ☐ Places rods, washers, and bolts in designated place
- ☐ Document necessary data
- ☐ Sends the composite part to the correct department in the designated location.
- ☐ Release mold correctly and demonstrates knowledge of product expectations.

Task List:

Daily:

- ☐ Place all tools and supplies in their designated area on the work station.
- ☐ Replenish the supplies that are needed for the day.
- ☐ Report any supply shortages to the Plugging Leader.
- ☐ Place all personal items in your locker or remove them from the workstation.
- ☐ Scrape excess epoxy and fill material from the floor.
- ☐ Place all broken nuts, bolts and rods in the recycle area.
- ☐ Sweep around and under the tables.

As Needed:

- ☐ Take out the trash.

Weekly:

- ☐ Dust your work station including shelves, light fixtures and storage cabinets.
- ☐ Empty the steel recycling drum outside in the designated recycle bin.
- ☐ Assist the plugging team with oven cleaning.
- ☐ Report any maintenance issues to the Plugging Leader/Project manager.
